EDUCATION

University of Maryland, Robert H. Smith School of Business

College Park, MD, USA

Master of Science in Information Systems, GPA: 3.9/4

December 2025

- **Relevant Courses:** Data Visualization, Data Processing and Analysis, Data Modeling and Decision Making, Big Data and Cloud Computing, Harnessing AI, Project Management

University of Mumbai

Mumbai, MH, India

Bachelor of Engineering in Electronics

October 2020

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy, Scikit-learn, Seaborn, Lifelines, Plotly), R, SQL, NoSQL, JavaScript, Java

Machine Learning: Statistical Model, Survival Analysis, Random Forest, Regression Analysis

Amazon Web Services: Lambda, Redshift, S3, Glue, CloudWatch, CloudFormation, API Gateway, SQS, SNS

Technologies: Tableau, Power BI, Excel, Git

Certificates: AWS Certified Developer Associate (Issued by AWS), [IBM Data Science Foundations](#), [IBM Data Science Methodologies](#)

WORK EXPERIENCE

University of Maryland, College Park, USA | Graduate Lab Ambassador

September 2024 – Present

- Managed daily lab operations, organized and maintained lab infrastructure, assisted the professor with lab sessions, supported students in practicals, and oversaw inventory management.
- Developed a relational database for inventory management for over 2000 lab equipment, using Microsoft SQL Server on AWS RDS, ensuring efficient tracking and management of lab resources.
- Developed an interactive Tableau dashboard for inventory management, extracting data from AWS RDS (Microsoft SQL Server) into Excel for daily updates, providing insights into equipment usage, availability, and conditions.

Biz2Credit Info Services Private Limited, Mumbai, India | Software Engineer

January 2023 – July 2024

- Engineered a robust ETL framework for a banking client using AWS services (S3, Glue, RDS) and Python, processing over 5,000 loan applications daily, which improved data processing efficiency by 60%.
- Led an 8-member team to revamp a banking client's Credit Analysis Memorandum (CAM), communicating with stakeholders to align with project requirements. Reduced report size by 40% earning a 'Functional Award'.
- Initiated a project that consolidated all steps of developing and updating CAM reports into one tool. The tool allowed developers to complete all steps with one click or individually, resulting in a **50%** reduction in time spent on client deliverables.

Capgemini Technology Services India Limited, Mumbai, India | Associate Consultant

September 2020 – January 2023

- Performed data analysis on order workflows, identifying insufficient inventory as the most common cause for order cancellation. Designed and implemented a solution reducing the **4% store cancellation rate to zero** by optimizing workflow.
 - Collaborated with business stakeholders to design and implement 5 interactive dashboards using Tableau, delivering real-time insights for improved decision-making and analytics.
 - Implemented AWS serverless infrastructure, to integrate the client system with third-party ensuring minimal impact on existing services. Developed script to activate **5,000** stores, enabling online order through third-party portal from the activated stores.
-

PROJECT EXPERIENCE

[Energy Transition Analysis](#) | Python, Pandas, Plotly, Matplotlib

- Analyzed CO2 emissions vs. population growth in the Euro Area (1970-2010), uncovering a shift in emissions trends post-2009.
- Identified key drivers of reduced fossil fuel dependency, including increased renewable energy imports and urbanization.
- Delivered presentation using interactive visualizations to effectively communicate findings, supporting understanding of Euro Area's transition to sustainable energy.

[Transplant Survival Prediction for Hematopoietic Cell Transplantation \(HCT\)](#) | Lifelines (for Cox Proportional Hazard Model),

XGBoost, LGMB Regressor, LGMB Classifier, Matplotlib, NumPy, Pandas, Matplotlib

- Developed predictive models in a Kaggle competition focused on predicting survival rates for patients undergoing HCT with a goal of providing accurate predictions of a patient survival chance at a successful transplant outcome.
- Handled categorical variables with one-hot or label encoding, addressed missing data, managed multicollinearity by identifying and removing highly correlated features using VIF, and scaled numerical features utilizing MinMaxScaler.
- Built an XGBoost and Cox-Proportional Hazard model to evaluate impact of covariates. Used k-fold cross validation for hyperparameter tuning. Combined the outputs leveraging strengths of both methods to improve prediction accuracy.
